

User Manual: Modules & Features Checker

1. Introduction

The **Modules & Features Checker** is a browser extension designed for QA teams to verify website configurations instantly. It scans the current webpage and compares the settings against a specific standard (Essential or Concierge) or against another "Reference" website (Mirror Mode).

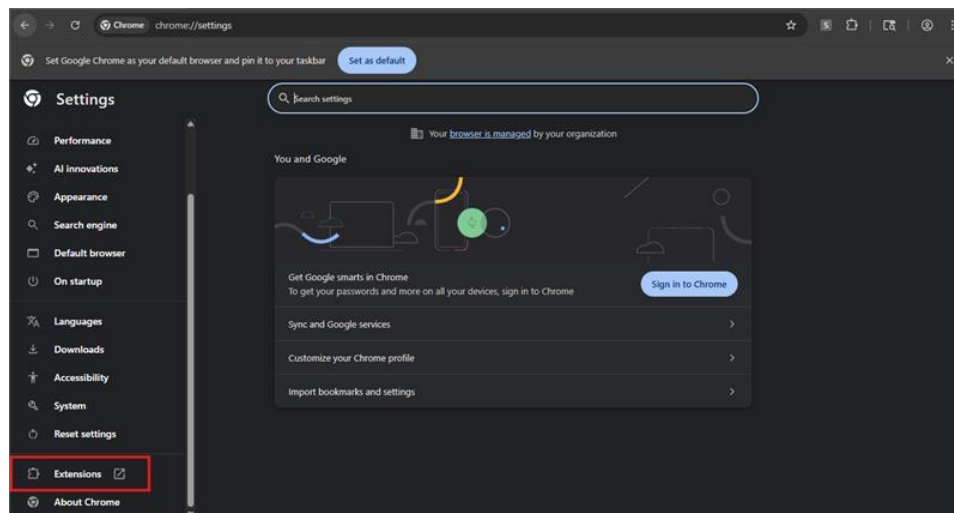

Key Capabilities:

- **Automated Scanning:** Instantly reads dozens of settings so you don't have to.
 - **Visual Feedback:** A progress bar shows completion status (Red/Lime/Green).
 - **Error Highlighting:** Click on an error in the report to scroll directly to that setting on the webpage.
 - **Mirror Mode:** "Clone" the settings from one perfect site and check if another site matches them exactly.
-

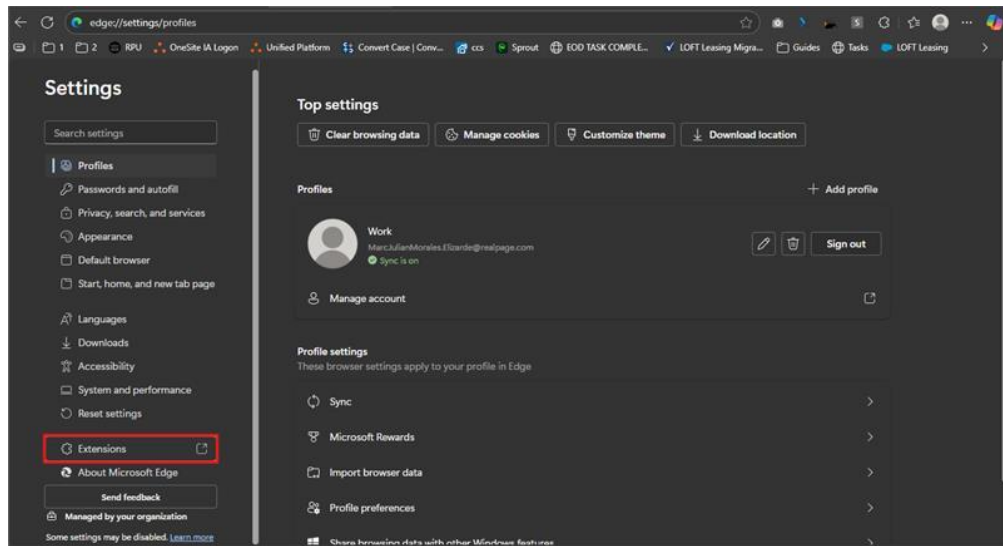

2. Installation Guide

Since this is a custom extension, it must be installed in **Developer Mode** on Chrome or Microsoft Edge.

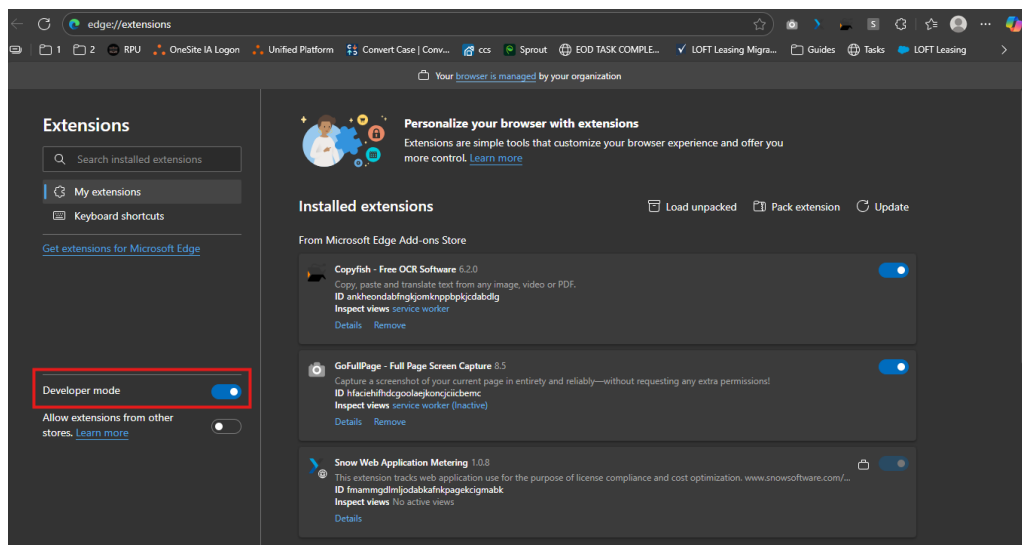

1. **Download & Extract:** Save the extension files into a single folder on your computer.
2. **Open Extensions Menu:**
 - **Chrome:** Go to `chrome://extensions/`

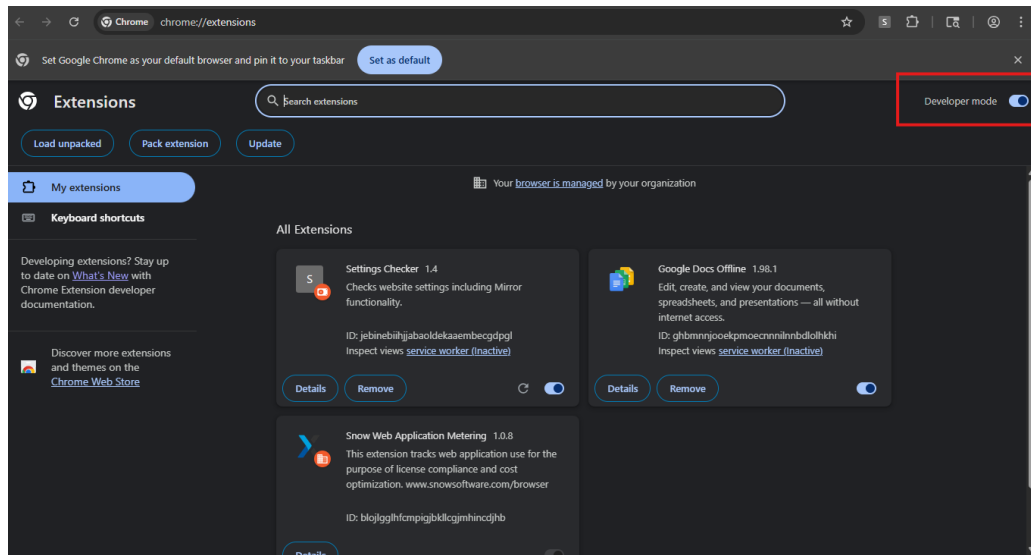

- **Edge:** Go to `edge://extensions/`

3. **Enable Developer Mode:** Toggle the switch in the top-right corner of the browser window.

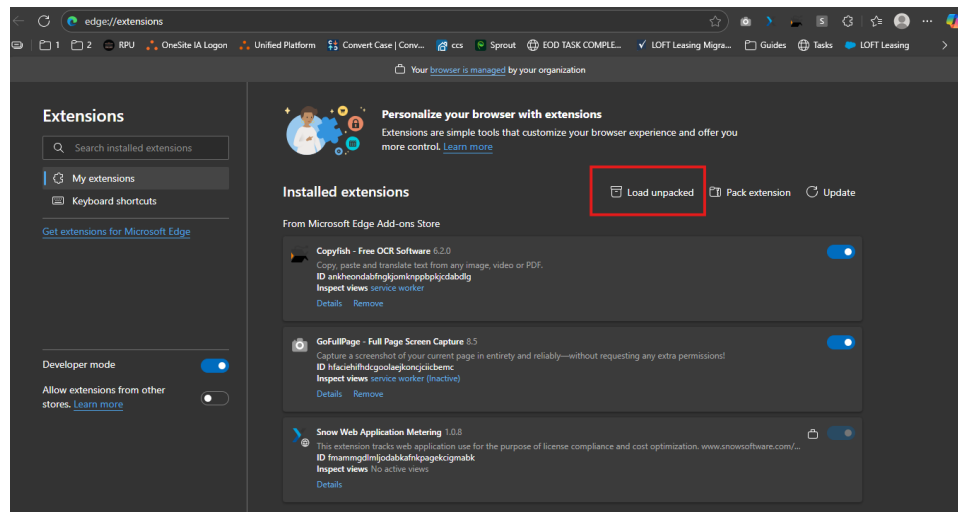

Edge

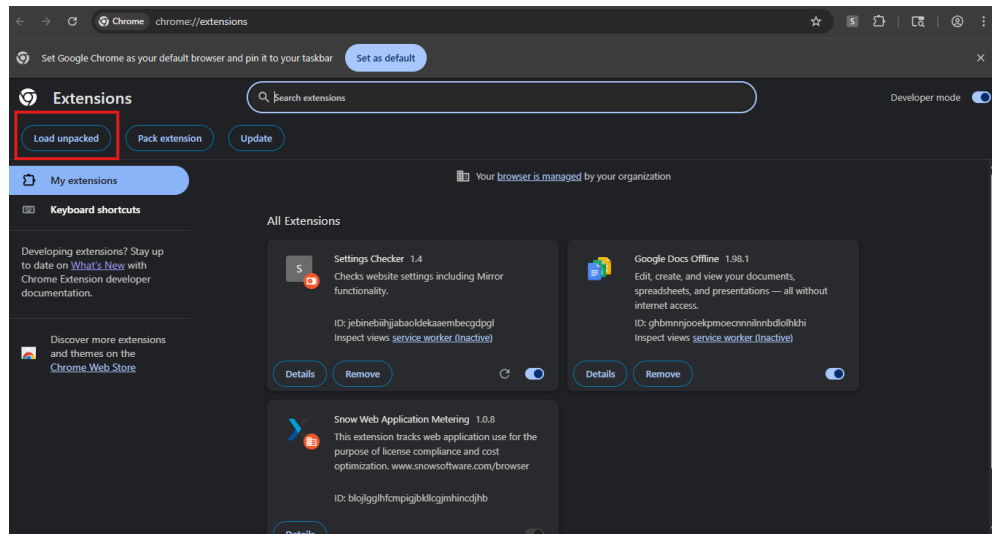

Google Chrome

4. Load Unpacked:

- Click the **"Load unpacked"** button.

Edge

Google Chrome

- Select the folder where you saved the extension files.
5. **Pin it:** Pin the extension icon to your browser toolbar for easy access.

3. How to Run a Standard Check

Use this mode when checking a site against the standard **"Essential"** or **"Concierge"** templates.

1. **Navigate to the Settings Page:** Open the website you need to audit.
2. **Open the Extension:** Click the icon in your toolbar.
3. **Select Category:** Choose **"Essential"** or **"Concierge"** from the dropdown menu.
4. **Manual Verification (Crucial Step):**
 - Look at the "eRenterPlan" section on the actual webpage.
 - If the property box is checked on the website, you **MUST** check the box labeled **"eRenterPlan Property Box Checked?"** in the extension popup.
 - *Note: If you forget this step, the tool will automatically mark Renters Insurance as a Fail/Off.*
5. **Run Check:** Click the **"Check Settings"** button.
6. **Review Results:**
 - **Green Bar (100%):** The site is perfect.
 - **Red/Lime Bar:** Mismatches were found. The specific errors will be listed below the bar.

4. How to Use Mirror Mode

Use this mode to compare a "Target" website against a "Reference" (Golden/Perfect) website.

Step 1: Scan the Reference Site

1. Open the **Reference Website** (the one that is set up correctly).
2. Open the Extension and select **"Mirror"** from the dropdown.
3. Click the blue **"Scan Reference Site"** button.
4. The button will turn green and say **"Saved"**.
 - *The extension remembers this data even if you close the popup.*
 - *The status text will show the name of the property you just scanned.*

Step 2: Check the Target Site

1. Open the **Target Website** (the one you are testing).
2. Open the Extension and select **"Mirror"**.
3. Verify the status text says: *"Current Reference: [Name of Property you scanned]"*.
4. Perform the **Manual Verification** step (eRenterPlan checkbox) if required.
5. Click **"Check vs Mirror"**.
6. The report will show any differences between the Target site and the Reference site.

5. Understanding the Report

The Progress Bar

- **Green (100%):** All detected settings match the expectation.
- **Lime (50-99%):** The site is mostly correct but has some errors.
- **Red (<50%):** The site has significant configuration errors.

The Error Log

The tool **only displays mistakes**. If a setting is correct, it is hidden to keep the report clean.

- **Expected:** What the setting *should* be (based on the Template or Mirror).
- **Actual:** What the setting *currently is* on the website.

Interactive Highlighting

- If you see an error in the list, **click on the error text**.

- The extension will automatically scroll the webpage to that specific setting and highlight it in **Yellow** for 3 seconds.
 - *Tip: Use this to quickly locate and fix checkboxes or dropdowns.*
-

6. Exporting Data

For documentation or auditing purposes, you can save the results.

1. Run a check (Standard or Mirror).
 2. Click the **"Export CSV"** button.
 3. A .csv file will download to your computer.
 4. You can open this file in Microsoft Excel or Google Sheets to see a full line-item report of every setting (both correct and incorrect).
-

7. Troubleshooting

- **"No data found" Error:**
 - Ensure you are on the correct settings page of the website.
 - Try refreshing the webpage and opening the extension again.
- **Renters Insurance shows "Off" even though it is on:**
 - You likely forgot to check the manual **"eRenterPlan Property Box Checked?"** box in the extension popup. Check it and click "Check Settings" again.
- **Mirror Mode isn't accurate:**
 - Ensure you scanned the correct Reference site first. Look at the status text to confirm which property is saved in memory.
 - *Note: Deeply nested settings in Mirror mode are currently experimental and may require manual double-checking.*
